

Test Result for run 10 which was started on: 8/1/2025 3:20:37 PM and had an elapsed time of 00 hour(s), 06 minute(s), 35 second(s)

(Comment: Teste valido)

Workload	Testbed	Database Under Test
TPC-E Transaction Mix (Mix test with 10 transactions and userload(s) of 1,2,4.) (Details)	GUSTAVO (4 Agents) (Details)	Connected to Microsoft SQL Server database using ODBC DSN gustavo as (Details)

Results Summary

The maximum server throughput was found at userload 4 (TPS = 588.212). At this point the average response time of the server was 0.001 seconds.

- Since the maximum TPS was found at the last userload of 4, it is possible that a higher throughput may be attainable at a higher userload. Consider re-executing test with a higher userload.
